## Tree Species List

All trees are special in their own way from the rare and exotic to the more common species. Here at Apley we're trying to create a balance of native trees that are the mainstay of any English woodland and also continue the legacy left by the Charlton family by adding new species to create a unique collection. Woodlands don't stand still and are constantly evolving so with storms and good management creating new spaces there are always opportunities to plant for the next generation.

Below is a list of tree species at Apley;
